

A Smarter, Faster and More Accurate Approach to Travel Risk Management

New Mobile Duty of Care Solution

SafePoint is a new kind of travel risk management solution for more accurately finding and communicating with traveling employees impacted by an event. It automatically monitors travelers' trips, proactively notifies those that may be impacted, and requests that they "check-in" with their status so that you can easily determine if they are ok or need assistance.

sabre.com/safepoint

Accurate travel data from any GDS or online booking tool, including out-of-program data

Best-in-class alerts automatically delivered to you and impacted travelers

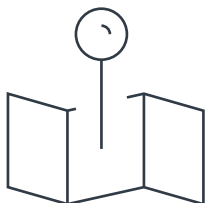

Instant traveler engagement through integration with TripCase

Self-service dashboard reduces response time by allowing you to locate & communicate directly with travelers

Ensure comprehensive coverage by easily integrating with your existing security and medical response service providers

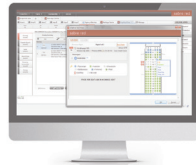

Proactive Automated Messaging

Automated alerts delivered to all travelers via SMS text message as well as email notifying them of the risk, providing advice to keep them safe, and requesting that he or she "check-in" with their status and location. For those travelers also using TripCase, alerts are also provided via a push notification as well as an in-app message in the traveler's smartphone or smartwatch (both iOS and Android are supported).

Dashboard with Detailed Traveler Data

Alerts and traveler status are all easily accessible via a self-service dashboard that is available across desktop, tablet, and smartphone. It provides quick visibility to all of the active alerts that may be impacting your travelers, including the ability to easily drill into a specific alert to get additional information on your impacted travelers' status, location, contact detail, and full itinerary.

- Monitors alerts for potential traveler impact
- Notifies corporation of potential impact
- Automatically notifies impacted travelers requesting a check-in
